

Digit Place

You need: a partner

a chart:

Guess	Digit	Place
24	0	0
18	1	1

Directions:

1. One person picks a two-digit number whose digits are different.
2. The other person tries to guess the number.
3. For each guess, the first person tells the guessing person how many digits in the guess are correct and how many digits are in the correct place. Do not tell which digit is correct, just how many are correct.
4. Record your guesses on a chart.
5. Play again with the other person guessing this time.
